Turn Climate Change to your advantage - - grow your business!

The right approach – it's good for your business and for the environment

How You Can Benefit from This

Climate Change is a major issue in today's business world. And the good news is that savvy companies that address Climate Change issues are reaping a double reward: operational benefits plus financial gain. Specifically, they have grown the bottom line, gained market share, raised revenue, reduced costs, while increasing customer, employee and community loyalty.

For example, General Electric has embarked on this initiative "not because it is trendy or moral, but because it will accelerate [economic] growth."

-Jeffrey Immelt, CEO

How CCES Can Help You Succeed and Maximize Benefits

Now is the time to talk to **Climate Change & Environmental Services (CCES)**, a recognized engineering consulting firm, to learn how your firm can achieve these important advantages:

- **reduce expenses**
- **create sellable carbon credits**
- **develop new products that increase sales**
- **improve efficiencies**
- **evaluate risks**
- **fast track future projects**
- **impress your customers and suppliers**
- **boost your reputation with employees, customers, and shareholders**
- **and many more....**

Over the past 25 years, CCES has built a successful track record of helping companies -- big and small -- benefit while complying with environmental rules. Our experts offer a comprehensive portfolio of environmental services, including management, engineering, strategizing and permitting focused primarily on Climate Change, Energy, Green Building, and Air Quality. CCES can also assist you in the areas of indoor air pollution, meteorology, wastewater, hazardous waste and health & safety.

Climate Change & Environmental Services can provide the right strategy for your business.

CCES selected services

- Design, implement and manage a customized, cost-effective **climate change program** that will satisfy your diverse stakeholders, advance your business, and be yours to grow.
- Create greenhouse gas (GHG) emission inventories (or “**carbon footprinting**”). Establish a baseline to devise effective systems that will reduce GHG emissions while maintaining your operations. Develop methodology that your firm can keep up the inventory seamlessly.
- Develop diverse, strategic options (system/equipment design, renewable power) to **reduce GHG emissions** that will pay for itself in reduced energy costs.
- Assess **Green building** alternatives that will improve building performance (payback the investment, raise its value), including gap analyses to determine building’s LEED status.
- Perform **Life Cycle Analysis** (LCA) to determine GHG emissions throughout your product’s life, from supply chain through transportation, consumer use, and product end of life. An LCA can pinpoint where to focus efforts to reduce GHG emissions and make your products more attractive.
- Evaluate **Climate Change risks** to minimize your exposure. We understand the regulatory, business and physical risks of operating your business in this new world of climate change.
- Calculate your **air emissions inventory** and develop cost-effective options to meet permit and regulatory requirements. We can prepare federal and state (i.e., Title V or minor) permit packages to give you greater operational flexibility, manage compliance audits and negotiate with agencies.
- CCES also has experts to help you in diverse environmental areas, such as indoor air quality, health & safety, wastewater, meteorology, and other areas.

Start seeing the benefits of greening your business *today*.
